July 8th, 2009, Leuven – For Immediate Release

IPCOS launches INCA Discovery

Today, IPCOS proudly announces the launch of their new model identification software, INCA Discovery. The new software will be used by Advanced Process Control (APC) professionals to analyse process data and build dynamic process models.

"We're very excited about the launch of this software product", said Dr. Peter van Overschee, CEO of IPCOS. "We are constantly innovating and looking for opportunities to enhance the software tool set of APC professionals. Our software was developed with the client experience in mind. INCA Discovery makes it easier for our clients to understand their process data by trending and analysing it as well as by building more accurate dynamic response models. These models will allow prior knowledge to be incorporated in the form of model gain, dead time and Time to Steady State constraints. In addition, our new model identification technology can create models with improved process realism."

INCA Discovery software is available as part of the INCA suite and as a stand-alone software product. The software can be licensed on a term or perpetual basis. For clients who wish to evaluate the software, the full version is available on an "evaluation license" basis.

Further details of the software's features, unique selling points and a white paper will soon be available at www.ipcos.com.

Notes for the Editor

Regarding IPCOS

IPCOS was founded in 1995 as a spin-off of the University of Leuven. The company develops advanced process control (APC) and optimization solutions, and supplies the services required to install and maintain them. The IPCOS engineers all have many years' experience in APC solutions for the different market segments in which the company is active. Thanks to strong investment in R&D and close co-operation with universities across the world, IPCOS is able to bring to market state-of-the-art products. (www.ipcos.com). The recent acquisition of Aptitude Ltd. has enabled IPCOS to diversify into the Refining and petrochemical markets and also take on board world class professionals in the APC area. IPCOS currently employs 60 people and has offices in Belgium (Leuven), The Netherlands (Boxtel), UK (Cambridge), India (Chandigarh) and Saudi Arabia.
